

Philosophy of Science

Christian education is committed to providing a complete education for God's people. The goal of Christian education is to help children know Jesus Christ as their Savior, to grow in their faith, and to develop their talents to be used in this life to bring glory to God.

The science program centers on the acknowledgement that the world in which we live belongs to God, who created and upholds it. Science is an essential tool for us to use in learning about the natural laws God has established so that we can care for the world wisely.

By means of textbook investigation, hands-on experimentation, special group projects, and technology-aided presentations, students discover various aspects of physical, earth, space, and life science and develop skills such as observing, comparing, hypothesizing, predicting, measuring, testing, and interpreting. Health and abstinence education units round out the science curriculum.
